

Any Access: Ethernet

Virtual1
Total network freedom

Ethernet technology offers a flexible, scalable access method which can now be extended from LANs to WANs.

Virtual1 offers Ethernet access on both internet and MPLS solutions, giving your customers greater choice for their network.

Two services are available: EtherExpress™ and Ethernet Everywhere™.

EtherExpress™

Virtual1's EtherExpress™ service is ideal for customers looking for an alternative solution to Leased Lines or SDSL. It is delivered over Ethernet in the First Mile (EFM) technology, is uncontended and offers a lead time of just 25 working days.

In addition, because EtherExpress™ is delivered over copper rather than fibre, it presents a cost-effective alternative to fibre-based solutions (such as Ethernet Everywhere) and is recommended for customers who need a quick installation or who may have problems with fibre access to their premises.

EtherExpress™ can also provide an excellent backup to our Ethernet Everywhere™ product, to allow both copper and fibre access.

Ethernet Everywhere™

Ethernet Everywhere™ from Virtual1 is aimed at larger businesses with greater connectivity demands. Available across the UK, it offers a dedicated service delivering uncontended fibre access at high speeds.

Its high scalability allows bandwidth to be increased quickly and easily in increments from 10Mb in line with your customer's emerging business needs, and it is backed by our industry leading SLA.

Features

EtherExpress™

Dedicated bandwidth

Uncontended copper access is provided at speeds up to 45Mb in London and 20Mb nationwide.

EFM technology

EtherExpress™ uses Ethernet in the First Mile (EFM) technology, which offers all the advantages of Ethernet without the disadvantages of fibre - such as Excess Construction Charges and longer lead times.

Quick to install

Installation only takes 25 working days (subject to feasibility and site survey).

Credible back-up service

The service can be used as a back-up to Ethernet Everywhere.™

Ethernet Everywhere™

High scalability

Fibre access is provided at speeds from 10Mb, with 10Mb increments for 100Mb circuits and 100Mb increments for 1Gb circuits.

Fibre based technology

Ethernet Everywhere uses fibre-based Ethernet technology.

Delivery lead time

The lead time for implementation is 60-90 working days (subject to feasibility and site survey).

Choice of access technologies

Customers can choose to have a pre-configured router or Wires Only.
