

MPLS

Virtual1
Total network freedom

Your customers can now connect to more locations than ever before, with just 1 network and 1 supplier. The MPLS service from Virtual1 is a cost effective solution that enables fast, reliable communications between multiple offices – irrespective of their geographic location.

Any time, anywhere

By interconnecting with leading tier 1 carriers the Virtual1 MPLS network has one of the largest UK footprints, providing the freedom to add a new location – whenever and wherever. All Virtual1 networks are fully bespoke, designed to meet the needs of the individual business.

Fast, secure and robust

High speed connectivity will carry your customer's communications quickly and effectively, including any speed-sensitive applications such as voice and video. For further peace of mind, enhanced options offer flexible and dynamic routing which allow traffic to be routed along the quickest route to avoid any bottlenecks and automatically re-routed in the event of a network outage on a circuit.

Future-proof

MPLS is highly scalable so it can be easily adapted to meet changing business requirements. Additional sites can be added to the network whenever needed, thus improving your customer's financial returns on their initial telecommunications investment.

Moreover, because the network can support voice and video communications, as well as other prioritised data, companies that install an MPLS network now can introduce Voice over IP and Video Conferencing facilities at any point in the future as the infrastructure will already be in place.

Features

Any access, anywhere

Wide geographic spread means MPLS is ideal for both multi-site UK businesses and those with global offices. The sites are connected to the network through a range of technologies, including high speed Ethernet.

Resilient, self healing network

Enhanced options mean network traffic is re-routed dynamically in the event of a core network outage, ensuring minimal downtime for your customer's business.

Flexible addressing

Migration is made simple as businesses can continue to use their current LAN IP addressing scheme.

Support for multiple classes of service

This ensures that businesses can run real-time applications such as voice and video alongside their data.

Virtual1: Total network freedom

Virtual1 offers its partners the freedom to build and manage the ideal local, national or global network for their customers. As an independent wholesale aggregator, we deliver connectivity solutions – from DSL through to complex MPLS – exclusively to the Channel. Our interconnects with the leading UK and global carriers provide access to more than 230 countries and territories using the most technologically advanced networks available.

We understand that every customer has different needs, so our solutions are individually tailored; and with multiple access methods available, our partners connect any time, anywhere, using just 1 supplier and 1 Service Level Agreement. To find out how you can build the ideal network for your customers call us today on 0844 884 0800 or visit www.virtual1.co.uk.
