

# Private Lines

**Virtual1**  
Total network freedom

Protect mission critical data and stay connected the easy way with Virtual1. The dedicated connectivity provided by our Private Lines is the best and simplest way to ensure the security of commercially sensitive data – whether across the UK or further afield.

## Dedicated connectivity

With dedicated, permanent bandwidth between two sites, Virtual1 Private Lines are uncontended – enabling them to provide both fast and secure communications. Local and global availability means that no matter where your customer's data needs to go, our network can get it there. And, if required to meet data compliance issues, customers can choose even greater protection by retaining full control of routing, protocols and security.

## Resilient network

Virtual1 Private Lines are delivered over a technologically advanced network, which is supported by stringent SLAs. For International links where customers need guaranteed availability, enhanced service options allow data to be automatically re-routed in the event of a network outage – even if a sub-sea cable should go down – thus ensuring minimal business disruption. What's more, our wide footprint means that Private Lines can also be used as a backup / triangulation service to our MPLS solution, for enhanced resiliency.

## Global coverage

Virtual1 Private Lines are available across the UK and globally. What's more, we have developed strategic partnerships which provide interconnects to some of the harder to reach emerging markets in the Middle East, including Saudi Arabia, Kuwait, Bahrain and the UAE.

## Features

### **Permanent point-to-point connection**

This ensures guaranteed bandwidth for your customer's business as well as totally secure communications.

### **Choice of managed or unmanaged service**

Flexible options cater for your customer's individual needs.

### **Fully scalable**

Speeds from 2Mb to 10Gb Ethernet, available in small increments, provide complete flexibility and scalability.

### **Complete range of access methods**

Customer sites are connected to the network through a range of technologies, including SDH and Ethernet.

### **Virtual1: Total network freedom**

Virtual1 offers its partners the freedom to build and manage the ideal local, national or global network for their customers. As an independent wholesale aggregator, we deliver connectivity solutions – from DSL through to complex MPLS – exclusively to the Channel. Our interconnects with the leading UK and global carriers provide access to more than 230 countries and territories using the most technologically advanced networks available.

We understand that every customer has different needs, so our solutions are individually tailored; and with multiple access methods available, our Partners connect any time, anywhere, using just 1 supplier and 1 Service Level Agreement. Find out how you can build your ideal network: call us today on 0844 884 0800 or visit [www.virtual1.co.uk](http://www.virtual1.co.uk)
